GENERAL PROCEDURE AND OBSERVATIONS.

- 35 No first planting.
Drainage. Drains in frosty hollows and checked areas were cleaned; also drains in recently thinned N.S. acquired plantation.
Weeding. Weed growth has been heavy especially in netted areas. A large area had to be covered owing to scattered B.U. in recent years.
Cleaning. Adventitious species cut out in P's. 24, 25, 28, 29, and 30.
Pruning. 6.0 acres of acquired plantations were pruned up to 16 feet (565 poles), mainly S.P.
Thinning. 25 acres of acquired plantation was thinned for the second time.
-
- 36 No change.
-
- 37 No change in general procedure.
-
- 38 No change.
-
39. No first planting.
Drainage Drains in acquired plantations were cleaned after thinning.
Weeding. Becoming very light except in netted areas at Glasgoego.
Cleaning. P.22 J.L. thinned and cleaned for the first time. Experiments in partial brashing carried out. This is none too early to thin this species.
 Otherwise no change in procedure.

GENERAL PROCEDURE AND OBSERVATIONS

'51

P.51 and 52 areas

Whin and broom cut and brush burned.

P.52. No advance draining was done because the plough is expected to take out drains after ploughing.

P.51. Rank heather was not burned because the hard winter afforded no opportunity.

Selection of Species:-

S.S. on turves in flushes.

N.S. on ploughed old arable land (ploughed with solotrac to give broad thin slice)

P. Omor. (C.44) planted on mounds in the most frosty hollow in the forest.

J.L. were notch planted on roadsides and Compt. boundaries for fire protection.

D.F. were planted on a grassy site sloping to the East and having good shelter from the north and west.

P.50. 30 acres B.U. mainly with S.P. to replace Vole damage.

P.24/25. Thinning: a three year cycle has been adopted for N.S., S.S., J.L., and D.F. S.P. areas are on a 6 year cycle. The general principle was to thin lightly.

P.46. S.P. damaged slightly with Sawfly (*Lophyrus pini*).

P.45-47 and 49-51. Weeding. Weeding was heavy due to the amount of whin on the area.

GENERAL PROCEDURE AND OBSERVATIONS

53 PLANTING:- 218acs. As this area was at a road side JL were planted to act as a firebreak.

Thinning:- P23 area was thinned. The policy was to give crown room to the better quality trees and to improve quality. Thinning was ceased in favour of clearance of damage done by the gale of 31.1.53.

Weeding :- P45-52 areas were weeded. Work of weeding was delayed as long as possible to avoid repeating the work at the end of the season.

GENERAL PROCEDURE AND OBSERVATIONS

54

PREP GROUND

Hard granetic soils ploughed by Tine before planting

PLANTING

Selection of species followed usual pattern. On suitable sites groups of J.L. in S.P. P.C. in J.L., Syc. in S.P. and Oak in S.P. were used to creat uneven plantation.

Larch and Thuja were planted in Rowan scrub. For pines and larches planting was done by notching into the furrow beside the subsoiled area. Spruces were planted on the furrow slice.

All plants were manured with 2 oz. G.M.F

WEEDING

Was carried out on grassy and bracken areas.

DRAINS NEW

Confined to opening drains to dry out valley bottoms.

Work in older plantations was confined to clearing up damage done by the gale of 31.1.53.
