In three sizes:
24 in., 30 in.,
36 in.

This is the saw for ripping through rough woods (logs, fencing) with less effort in two-thirds the usual time. Knuckle-guard for preventing bruises when sawing deep; rubber handgrip, comfortable in all weathers; strong oval-section frame; thumb screw adjustment for rapid, easy blade changing.

THE SWEDISH

PARTNER

PETROL DRIVEN CHAIN SAW

BORN OF SCANDINAVIAN EXPERIENCE IN ECONOMICAL OPERATION UNDER GRIM CONDITIONS

- Lightweight—27 lb.
- All shafts mounted in either roller or ball bearings.
- Chromium plated cylinder, for perfect cooling and long endurance.
- Hermetically closed magneto, and automatic ignition timing.
- Self rewinding starter.
- Only one control—combined gas and clutch—operated by thumb, and moving back automatically to idling when released.
- Automatic clutch disengages if chain is pinched, without stopping motor.
- Short circuit switch adjacent to control.
- Chain is automatically oiled by synchronised pump; oil is preheated by the engine to ensure correct viscosity even at low temperatures.

THE **LINER** PORTASAW

WILL WORK ANYWHERE

The 'TRAILEX PORTASAW'

Completely portable and mounted on pneumatic tyres for easy towing. It will rip, cross-cut, and bevel. For 7-in. and 9-in. cuts. Driven by petrol engine. There is also the bench model 'Portasaw' on 4 iron road wheels, driven by petrol or diesel engine or electric motor.

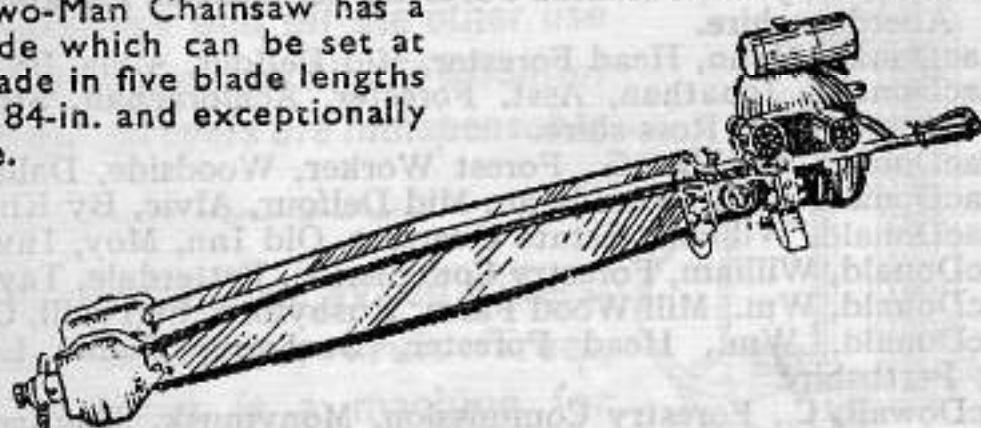

CUTTING COSTS...

The 'TWO-MAN' CHAINSAW

Driven by a petrol engine, or electric motor, the Two-Man Chainsaw has a reversible blade which can be set at any angle. Made in five blade lengths from 39-in. to 84-in. and exceptionally easy to handle.

HIAB HOISTS

LOADING, UNLOADING
AND POWER SLEWING

The Hiab hydraulic hoist is the latest development in scientific timber handling. Permanently mounted behind the driver's cab, it enables the driver alone to load and unload small timber which would otherwise require as many as six men. The hoist can be operated from either side, by the driver standing either on the lorry or on the ground. The jib is telescopic, and closes up for travelling. The hoist is designed for loading particularly in confined spaces such as forest rides. Constructed from special high-tensile steel it has a lifting capacity of 1 ton. The simplicity and ease of control make it an essential piece of equipment for every Timber Merchant.
