

These buildings are designed for the rural environment and utilise sustainable resources of home grown timber in construction.

Conifer poles, forest thinnings, are bent while fresh to form the prestressed timber structure, resulting in strength and form which reflects the curves of the surrounding landscape.

The all wooden buildings are clad in feather edge boards, selected for durability to give a natural weather resistant finish. Insulated to any specification they provide a spacious, light and comfortable living space, ideal for all year round use.

This versatile construction system offers a wide range of alternatives and most importantly can be applied to respond to the needs of individual customers and sites.

About the Designer

Charles Gulland, is a graduate of Hooke Park College and former Designer-in-Residence with the Countryside Commission for Scotland. Winner of the Nat West Bank / National Farmers Union Venture Cash Business Award 1992, he established All Round Buildings in the same year. He is committed to environmentally sound technologies and uses only sustainable resources in his constructions.

*"A Building Should Anchor into
and represent the Meaning of the Place"*

Printed on Recycled Paper

rural structures in wood

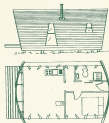

Longhouse

The Longhouse provides spacious, well-lit, fully insulated accommodation for up to eight people – with plenty of storage space. Durable natural cladding blends with the local landscape, yet the flexible foundation system allows construction on the most rugged site.

Features:

- Sleeping loft • Double bedroom • Shower & WC
- Veranda • Wood stove • Double glazing
- Under-floor storage for outdoor equipment.

Landscape Shelter

Aesthetic natural form, giving the user a sense of being at one with nature – The Landscape Shelter has a range of potential uses: at golf courses, beaches, or parks; as fishing huts, kiosks, summerhouses, sheds, barbecue huts or information points.

All Round Shelter

A timber canopy which can be used as an interpretive shelter, barbecue hut, or seating.

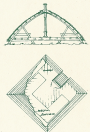

Wigwam

The Wigwam could be described as a 'wooden tent' or low-cost camping cabin. It is an all-weather, all-season cabin with spacious, well-lit accommodation for up to six people.

Features:

- Cooking area • Sleeping platforms
- Wood stove • Ample internal storage space
- Further storage under raised foundations
- Lockable entrance

Buildings designed for the rural environment, constructed from sustainable resources of home grown timber, designed to respond to the needs of individual customers and site.
